***Claims Allowed***

Claims 1-21 are allowable over the prior art of record. The claims are allowable because the prior art does not anticipate nor render obvious the invention of an epicyclic gear carrier assembly with at least one carrier plate, the plate having a plurality of bores disposed radially outward from a central axis, a plurality of gear axles disposed in the bores and supporting a plurality of epicycle gears thereon, and an epicyclic carrier member having a plurality of axle engaging elements coaxial with the gear axles and engaged thereto by load transmission members.

***Prior Art Discussed***

The examiner has considered the references cited in applicant's Information Disclosure Statement filed October 25, 2004. None of the references show all of the features of the claimed invention. Katou '971 shows a planetary carrier arrangement including a plate 1, but does not show anything that could be interpreted as a load transmission member disposed between an axle and a carrier member.

The references cited by the examiner are deemed pertinent to applicant's disclosure. Taha '105 shows a planetary gear carrier with plates 12 and 28 but does not show anything that could be interpreted as a load transmission member disposed between an axle and a carrier member. Bellman '203 shows a plate 14, axles 34, and a carrier 12, but does not show anything that could be interpreted as a load transmission member disposed between an axle and a carrier member. Poulin '530 shows a planetary gearing associated with a gas turbine engine with a plate 48a and 48b, but the carrier 44 does not engage the axles 41 of the planet gears 38.
